Professional summary

Data Scientist with a dual background in Data Science and Business Administration, experienced in analytics, Business Intelligence, and automation. Builds end-to-end data solutions using **Python and SQL** for ETL, analysis, and predictive modeling, complemented by **Machine Learning, experimentation, and data visualization**. Proven track record designing automated data pipelines, executive Power BI dashboards, and Computer Vision and A/B testing projects focused on solving business challenges.

Professional experience

Freelance Analytics & Data Science Consulting

Data & BI Consultant · Remote / Bogotá, Colombia

April 2024 – Present

- Developed data analysis and predictive modeling solutions using **Python, SQL, and Machine Learning** to drive customer segmentation, demand forecasting, and strategic decision-making.
- Automated **ETL** pipelines with Python, SQL, and REST APIs, integrating multi-source data and eliminating manual extraction and reporting tasks.
- Designed executive dashboards in **Power BI** using advanced DAX and Power Query to transform raw data into actionable business KPI monitoring tools.

Cooperativa de Ahorro y Crédito de Tenjo (Cooptenjo)

Data & BI Analyst · Tenjo, Cundinamarca, Colombia

February 2022 – April 2024

- Designed and automated financial and loan portfolio dashboards in **Power BI** using optimized SQL queries and ETL pipelines, accelerating executive reporting and risk tracking.
- Implemented customer segmentation models based on transactional and credit behavior, identifying key opportunities for personalized commercial campaigns.
- Evaluated marketing and commercial campaign performance through conversion and retention metrics, delivering data-driven strategic recommendations.

Featured Data Science projects

Real-time parking occupancy monitoring system

Python, YOLOv8, FastAPI, WebSockets, OpenCV, SQLite

- Engineered an end-to-end Computer Vision web application to detect real-time parking space occupancy from live video streams using **YOLOv8** and persistent object tracking.
- Implemented an asynchronous backend with **FastAPI and WebSockets** for sub-second streaming, an interactive canvas module for parking bay polygon calibration, and SQLite persistence.

Digital experimentation platform & A/B testing

Python, Statsmodels, SciPy, Pandas

- Designed an A/B testing framework incorporating **CUPED** for variance reduction, achieving a **42.8% reduction in estimator variance** and significantly accelerating experiment runtimes.
- Implemented experimental quality controls, including **Sample Ratio Mismatch (SRM)**, hypothesis testing, and Average Treatment Effect (ATE) estimation across **290,000+ observations**.

Education

Pontificia Universidad Javeriana

2024 – 2026

M.Sc. in Data Science

Universidad Nacional de Colombia

2016 – 2021

B.S. in Business Administration

Technical skills

- Programming:** Python, SQL, DAX
- Data Science:** Pandas, NumPy, Scikit-learn, SciPy
- Machine Learning:** supervised, PyTorch, YOLOv8
- Computer Vision:** OpenCV, object detection
- Experimentation:** A/B testing, CUPED, causal inference
- Data Engineering:** ETL, relational modeling, APIs, SQLite
- Business Intelligence:** Power BI, Power Query, Tableau
- Software Development:** FastAPI, WebSockets, Git
- Languages:** English (B2 - Professional), Spanish (Native)
